

How to Help Prevent
Climate Change
In Your Own Little Way

Conserve Water

Watch your water usage by turning off faucets when not in use, taking shorter showers and avoiding unnecessary water consumption. When washing your hands or brushing teeth and tongue, don't let the faucet run when you're not using it.

Reduce Waste

Help reduce greenhouse emissions by practicing regular recycling. What are you cooking at home? Next time you go shopping for food at the grocery store, buy recycled goods, and buying less or in bulk to lessen packaging waste. The food you buy, and the money you spend is a how we consumers vote for greener options.

Save Energy

Use less energy by turning off appliances when not in use, switching to energy saving bulbs, and investing in energy saving appliances & objects.

Travel Green

1/3 of the world's gas emissions are because of vehicles, therefore ditching your car and walking or riding public transport helps lessen them.

Clean Energy

Try using renewable energy from time-to-time by installing solar panels and generating your own energy. Use of solar powered objects are good too.

Start Small

The little things make a difference – planting trees, and buying local produce helps lesson carbon footprint.
